

Java Developer Learning (Road Map)

We'll do it in stages:

Month 1 — Strong Java backend foundation

- Modern Java
- Collections
- Generics
- Streams/Lambda
- Optional
- Exceptions
- Multithreading/concurrency
- Clean Code
- SOLID
- Git
- Maven

Month 2 — Spring Boot

- Spring Core
- Dependency Injection
- Spring Boot
- REST APIs
- DTOs
- Validation
- Exception handling
- Configuration
- Logging

Month 3 — Database + Testing

- SQL

- PostgreSQL
- JDBC concepts
- JPA/Hibernate
- Spring Data JPA
- Transactions
- JUnit
- Mockito
- Integration testing

Month 4 — Professional backend

- Microservices
- Kafka
- Messaging/MQ concepts
- Spring Batch
- Security
- Docker
- API design

Month 5 — DevOps + production

- Kubernetes basics
- CI/CD
- Deployment
- Monitoring
- Cucumber/Selenium basics
- Architecture
- Production practices

And throughout this, we'll build **one realistic finance/loan application** rather than doing random tutorials.

How I'll teach you

For every topic, we'll use this pattern:

- 1. Explain the concept simply**
- 2. Show a real Java example**
- 3. You write code**
- 4. I review your code**
- 5. Give you exercises**
- 6. Ask interview questions**
- 7. Add the concept to our project**
